DETAILED ACTION

Response to Amendment

1. Applicant's arguments/amendment, filed 06/02/08, have been fully considered and entered.
2. Claims 1-31 have been allowed.
3. Claim 32 has been cancelled.

Reasons For allowance

4. As per claims 1, 21 and 26: The present invention discloses a method/system of transforming measurements of a device under test (DUT) produced by a test system, the method comprising:

determining a port-specific difference array, the difference array describing a difference between a first test fixture and a second test fixture at a corresponding test port of the test fixtures; measuring a performance of the DUT using the test system, wherein the DUT is mounted in the second test fixture; and

applying the port-specific difference array, such that the measured DUT performance approximates a hypothetical DUT performance for the DUT mounted in the first test fixture and measured with the test system.

The prior arts of record teach a method/system of measurements of a device under test (DUT) produced by a test system, the method comprising:

Art Unit: 2117

creating a calibration array and measuring a performance of the DUT using the test system;

applying the calibration array, such that the measured DUT performance approximates a hypothetical DUT performance for the DUT mounted in the first test fixture and measured with the test system.

But the prior art of records fail to teach determining a port-specific difference array, the difference array describing a difference between a first test fixture and a second test fixture at a corresponding test port of the test fixtures, measuring a performance of the DUT using the test system, wherein the DUT is mounted in the second test fixture. Therefore, the prior arts of record fail to anticipate or render obvious the claimed invention.

5. As per claim 15: the present invention discloses a method of calibrating a test system for more than one test fixture, the method comprising:

measuring parameters of a first test fixture having a calibration standard mounted in the first test fixture, measuring being performed using the test system connected to the first test fixture;

measuring parameters of a second test fixture having the calibration standard similarly mounted in the second test fixture, measuring being performed using the test system connected to the second test fixture; and

adjusting a calibration of the test system using differences between the measured parameters for corresponding ports of each test fixture, wherein the adjusted

Art Unit: 2117

calibration is a port-specific calibration of the test system such that measurements taken with the test system for a device under test (DUT) in either test fixture approximate each other.

The prior arts of record teach a method/system of measurements of a device under test (DUT) produced by a test system, the method comprising:

- creating a calibration array and measuring a performance of the DUT using the test system;

- applying the calibration array, such that the measured DUT performance approximates a hypothetical DUT performance for the DUT mounted in the first test fixture and measured with the test system.

But the prior arts of record fail to teach adjusting a calibration of the test system using differences between the measured parameters for corresponding ports of each test fixture, wherein the adjusted calibration is a port-specific calibration of the test system such that measurements taken with the test system for a device under test (DUT) in either test fixture approximate each other. Therefore, the prior arts of record fail to anticipate or render obvious the claimed invention.

6. The examiner therefore, in regard to the independent claims 1, 15, 21 and 26, has allowed the said claims as a result of failing to disclose the unique features as claimed by the applicant. Subsequently, the dependent claims 2-14, 22-25 and 27-31

Art Unit: 2117

are also allowed by virtue of their dependence. The claims are renumbered as claims 1-31.

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Exr. Merant Guerrier whose telephone number is (571) 270-1066. The examiner can normally be reached Monday through Thursday from 10:30 a.m. to 3:30 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jacques Louis Jacques, can be reached on (571) 272-6962. Draft or Informal faxes, which will not be entered in the application, may be submitted directly to the examiner at (571) 270-2066.
